Lake Murray Trunk Sewer Replacement

Fact Sheet

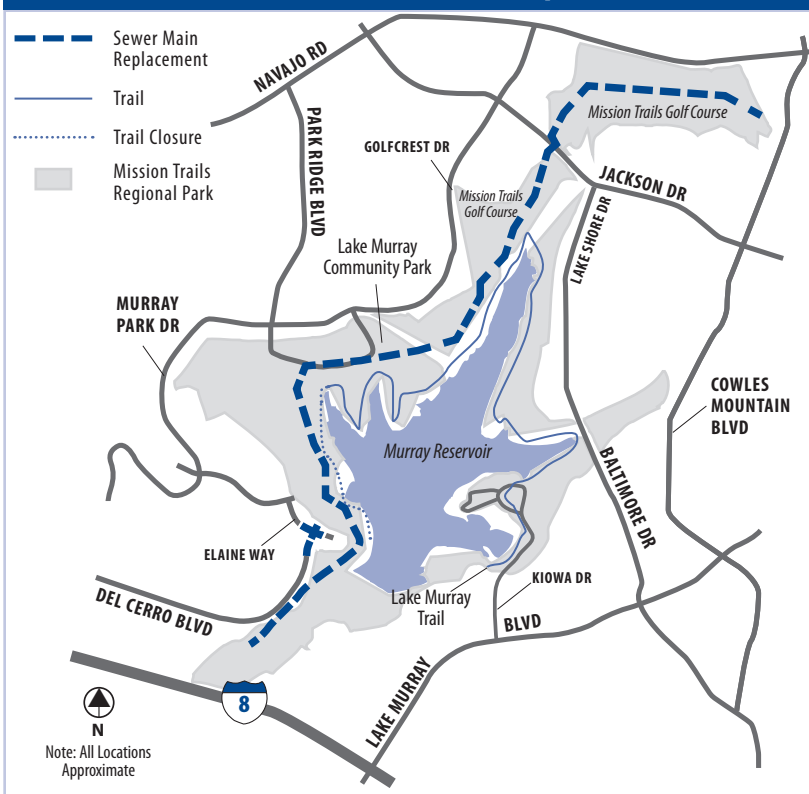

Project Description

The Lake Murray Trunk Sewer Replacement Project consists of installing nearly three miles of new 18-inch to 27-inch diameter durable plastic sewer mains to replace the deteriorating clay pipes that are nearing the end of their service life.

These improvements will reduce maintenance needs, increase the size of the existing main to better serve the area, improve service reliability and minimize the possibility of sewer main breaks caused by aging pipes. The total cost of this project is approximately \$7.9 million.

Project Location Map

The sewer main is located along the west side of Murray Reservoir in the Del Cerro and San Carlos communities. The pipeline runs under portions of Mission Trails Regional Park, Lake Murray Trail, Lake Murray Community Park and Mission Trails Golf Course. The northern end of the pipeline is under Jackson Drive, ending near Cowles Mountain Boulevard. The southern end of the pipeline is south of Murray Dam. In addition, a small portion of construction work needs to take place under the intersection of Del Cerro Boulevard and Elaine Way.

Work Schedule

Construction is anticipated to begin in June 2010 and continue for approximately two years.

Normal work hours are Monday through Friday, 7 a.m. to 4 p.m. Please note that construction crews may need to extend working hours to nights or weekends in case of an unforeseen circumstance. Residents and stakeholders will be promptly notified of construction schedule updates via door hangers and the project website.

continued on page 2

Approximately a half-mile of the Lake Murray Trail will be closed for about three to four months.

If you have any questions about this project, please call our public information line at (619) 533-4207.

What to Expect

This project will use a combination of open-trench construction and tunnel boring. Crews will tunnel underneath a small portion of Jackson Drive, which will avoid any disruptions to traffic on that street.

Crews will need to trench through a portion of the recreational areas along the west side of Murray Reservoir. This work will close about a half-mile portion of the Lake Murray Trail for about three to four months, anticipated to begin in summer 2010. Crews will also be working in the parking lot of the Lake Murray Community Park near the baseball fields, but work is not expected to affect regularly scheduled baseball or softball games in the park. Be advised to watch for construction and use caution near the work.

Construction will also take place through portions of Mission Trails Golf Course, which will result in a closure of the golf course from January through March 2011. Crews will replace all disturbed areas of the golf course once the pipeline replacement work is complete. The project team is working closely with golf course staff to minimize inconveniences to golfers during this time.

As part of the construction, portions of Mission Trails Golf Course are anticipated to be closed from January through March 2011.

As part of the project, there may be some minor road disturbances near the intersection of Del Cerro Boulevard and Elaine Way while work is completed under those streets. Residents in that area will be notified about this work before it begins.

While construction creates unavoidable closures, noise, dust and dirt, the team will minimize the disruptions as much as possible. Please be mindful of signs near the recreational areas warning about construction work and closures.

Contact Information

Additional information about this project can be found at www.sandiego.gov/engineering-cip. Click on "Projects & Programs." You may also call the public information line at (619) 533-4207 or email engineering@sandiego.gov. Please reference Lake Murray Trunk Sewer in the subject line and provide your address in your contact information in the email. Allow one business day to receive a response.
